

ProjectSeaT

Transforming Maritime Training Into Interactive Experience

Train. Decide. Experience.

1. Maritime Training Should Feel Like the Job

Seafarers operate in demanding environments where awareness, judgment, and decision-making matter.

However, much of maritime training continues to rely on static presentations, passive content consumption, and completion-driven learning.

ProjectSeaT transforms maritime training content into interactive, decision-based learning experiences.

The learner does not simply watch training.

The learner experiences it.

2. The Problem: Training Is Being Completed, But Is It Being Experienced?

Traditional digital training often follows a familiar process:

Open Module → Read Slides → Complete Quiz → Mark as Complete

While this approach delivers information, it creates significant limitations:

- Passive learning can result in low learner engagement.
- Static presentations provide limited opportunities to represent operational situations.
- Training completion does not necessarily demonstrate practical understanding.
- Operational decision-making is difficult to evaluate through standard quizzes.
- Repetitive training formats can reduce learner involvement across multiple modules.

The Training Gap

Maritime operations are practical. Maritime training is still largely passive.

Traditional training is effective at delivering information, but static formats provide limited opportunities for learners to actively apply that knowledge.

ProjectSeaT is designed to bridge this gap.

3. The Business Opportunity: Existing Knowledge, Reimagined

Maritime organizations already possess valuable training knowledge, operational procedures, and structured learning content.

The challenge is not always the absence of training material.

The challenge is how that material is delivered and experienced.

ProjectSeaT provides a framework for transforming existing training content into:

- Interactive lessons
- Decision-based scenarios
- Simulated operational environments
- Gamified learning activities
- Measurable training experiences

The Opportunity

Transform an existing training library into a scalable digital training ecosystem.

Instead of rebuilding organizational knowledge from scratch, ProjectSeaT reimagines how existing knowledge can be experienced by the learner.

4. Introducing ProjectSeaT

ProjectSeaT is a gamified maritime training platform built around experiential learning and interactive decision-making.

The platform structures the learner's training journey through three key stages.

Stage 01: Mission Briefing

The learner understands the situation, training objectives, and operational context before entering the activity.

Stage 02: Preparation

The learner reviews procedures, equipment, and critical information required for the scenario.

Stage 03: Simulation

The learner enters an interactive environment, evaluates the situation, and makes operational decisions.

The ProjectSeaT Training Journey

Learn the mission. Prepare for it. Experience it.

5. The ProjectSeaT Difference

We Don't Gamify Slides. We Gamify Decisions.

Traditional gamification often focuses on adding engagement elements such as:

- Points
- Badges
- Progress bars
- Leaderboards

While these elements can improve participation, ProjectSeaT focuses on a deeper form of interaction.

Decision-Based Gamification

ProjectSeaT focuses on meaningful learner interaction.

Within a ProjectSeaT training experience, the learner is encouraged to:

1. Observe the environment.
2. Understand the situation.
3. Evaluate available actions.
4. Make a decision.
5. Experience the consequence.
6. Learn from the outcome.

Our Unique Selling Point

ProjectSeaT transforms maritime procedures into interactive decision-making experiences.

The objective is not simply to make training more entertaining.

The objective is to make training more experiential.

6. From Training Content to Interactive Experience

ProjectSeaT changes how traditional training material is presented to the learner.

Traditional Training vs ProjectSeaT

Traditional Training	ProjectSeaT Experience
PPT Slide	Mission Briefing
Procedure List	Interactive Preparation
Static Diagram	Explorable Environment
Multiple Choice Question	Operational Decision
Correct or Incorrect	Decision Consequence
Module Completed	Performance Recorded

The Transformation Journey

1. Existing Training Content

Training modules, procedures, and learning material.

↓

2. Scenario Design

Identify situations where learners can actively apply knowledge.

↓

3. Interactive Experience

Transform learning objectives into activities and decisions.

↓

4. Decision Simulation

Allow learners to evaluate situations and experience outcomes.

5. Performance Insights

Capture meaningful interaction and training performance.

A traditional training module becomes the foundation for an interactive learning experience.

7. Built to Scale Across Maritime Training

ProjectSeaT is not designed around a single simulation.

It is designed as a repeatable training framework capable of supporting multiple courses, modules, lessons, and interactive activities.

Training Structure

Learning Path

Course

Module

Lesson

Activity

Each training module can introduce different interactive experiences based on the learning objective.

These experiences may include:

- Equipment identification
- Procedure sequencing
- Hazard recognition
- Emergency response scenarios

- Operational decision-making
- Inspection scenarios
- Situation assessment activities

ProjectSeaT can support training experiences across areas such as:

- Port State Control inspections
- Vessel vetting preparation
- Safety and drill scenarios
- Equipment familiarization
- Environmental compliance
- Operational watchkeeping

The Business Advantage

The platform framework remains consistent while the training experience changes with the content.

One structured framework. Multiple training experiences.

This enables organizations to progressively transform multiple training modules into structured interactive experiences.

8. Beyond Training Completion

Traditional learning platforms primarily provide visibility into completion and assessment results.

ProjectSeaT is designed to explore a more meaningful question:

"How did the learner perform during the training experience?"

As the platform evolves, training experiences can provide visibility into:

- Decisions made
- Incorrect actions
- Repeated mistakes
- Scenario attempts
- Activity completion time
- Training activity performance
- Learning progression

From Completion Tracking to Performance Visibility

ProjectSeaT is designed to provide deeper visibility into how learners interact with scenarios, evaluate situations, and make decisions.

Managers and instructors can gain a clearer understanding of how learners interact with training scenarios.

Because completing training and understanding training are not the same thing.

9. End-to-End Digital Product Partnership

One Partner. The Complete Digital Ecosystem.

ProjectSeaT is more than the development of a maritime training application.

Building a secure, operational, and scalable digital training platform requires multiple technical capabilities working together across the complete product lifecycle.

ProjectSeaT brings these capabilities into a unified digital product partnership.

The organization provides the maritime training knowledge.

ProjectSeaT provides the digital ecosystem required to transform that knowledge into an interactive training experience.

Product and Software

The platform, interactive training experiences, and future product capabilities are developed as part of a continuously evolving product ecosystem.

This includes:

- Platform development
 - Interactive training experiences
 - Product enhancement
 - Technical evolution
-

Cloud and Infrastructure

The digital platform requires a reliable technical foundation capable of supporting deployment, availability, and future growth.

This includes:

- Cloud environment planning
- Infrastructure management

- Platform scalability planning
 - Environment architecture
-

Cybersecurity

Security is treated as part of the platform lifecycle rather than an afterthought.

Security considerations are incorporated across the product, infrastructure, access, and data lifecycle.

This includes:

- Application security
 - Cloud security
 - Security monitoring
 - Platform security practices
 - Data protection considerations
-

Deployment and Platform Operations

ProjectSeaT supports the technical processes required to move the platform from development into an operational environment.

This includes:

- Deployment workflows
 - Release management
 - Environment management
 - Operational reliability
-

Identity and User Management

A multi-role training platform requires structured control over user identities and access.

This includes:

- User access management
 - Role-based permissions
 - Identity lifecycle management
 - Platform access controls
-

Data and Database Management

Training platforms generate structured learning, activity, and performance data that must be managed responsibly.

This includes:

- Data architecture
 - Database management
 - Data protection
 - Platform data operations
-

The Connected Digital Ecosystem

ProjectSeaT brings these capabilities together through three connected areas.

Product

- Software Development
- Interactive Experiences
- Product Evolution

Platform

- Cloud Infrastructure
- Deployment and Operations
- Database Management

Protection

- Cybersecurity
- Identity and User Management
- Data Protection

These are not positioned as disconnected technical services.

They are coordinated capabilities supporting one digital maritime training ecosystem.

The End-to-End Advantage

Organizations should not need to coordinate multiple disconnected technical partners to build and operate a single digital training ecosystem.

ProjectSeaT provides a unified technical partnership across the platform lifecycle.

From product development to infrastructure, security, identity, data, deployment, and ongoing platform evolution.

Our Commercial Advantage

One technical partner across the complete platform lifecycle.

The organization provides the maritime training knowledge.

ProjectSeaT provides the digital ecosystem required to transform that knowledge into a secure, operational, and scalable training experience.

10. The Minimum Sellable Product

Start Focused. Prove the Experience. Scale the Platform.

The ProjectSeaT Minimum Sellable Product focuses on delivering the essential training journey required to demonstrate the platform's core value.

Platform Experience

- Learner authentication
- Structured learning paths
- Course and module navigation
- Training progress visibility
- Role-based platform experience

Interactive Training Experience

- Mission Briefing
- Preparation Stage
- Interactive Simulation
- Decision-based activities
- Scenario outcomes

Training Management

- Training assignment
- Learner progress tracking
- Basic performance visibility

MSP Objective

Prove that existing maritime training content can be transformed into an engaging, repeatable, and interactive learning experience.

The Minimum Sellable Product establishes the foundation required to validate the training experience before expanding across additional modules and training scenarios.

11. The ProjectSeaT Vision

A Training Ecosystem Built Around Maritime Experience

The initial ProjectSeaT experience demonstrates a focused transformation:

Today

One Training Module

One Interactive Experience

The long-term opportunity is significantly larger.

The Opportunity

Hundreds of Training Modules

A Maritime Training Ecosystem

ProjectSeaT can evolve to support interactive experiences across:

- Operational training
- Maritime safety procedures
- Emergency response scenarios
- Equipment familiarization
- Compliance training
- Role-specific learning paths

The Vision

Build a digital training environment where maritime professionals do not simply study operational situations. They experience them.

Our Core Philosophy

Training should not end when the learner clicks "Complete."

Training should create an experience the learner understands, remembers, and applies.

12. Why ProjectSeaT?

ProjectSeaT introduces a different approach to maritime digital training.

It combines structured learning, interactive decision-making, scalable training experiences, and end-to-end digital product capabilities within one unified platform vision.

ProjectSeaT Creates an Opportunity To:

- Reimagine existing maritime training content.
- Increase learner interaction with training material.
- Introduce decision-based learning experiences.
- Build repeatable interactive training scenarios.
- Gain greater visibility into learner performance.
- Scale training experiences across multiple modules.
- Build and operate the platform through a unified technical partnership.
- Integrate product development, cloud, cybersecurity, identity, data, and deployment into one connected ecosystem.

Two Core ProjectSeaT Advantages

The Product Advantage

We Don't Gamify Slides. We Gamify Decisions.

ProjectSeaT transforms maritime procedures into interactive decision-making experiences.

The Partnership Advantage

One Partner. The Complete Digital Ecosystem.

ProjectSeaT provides unified technical capabilities across product development, cloud infrastructure, cybersecurity, deployment, identity, user management, and data operations.

13. Ready to Rethink Maritime Training?

Your Training Knowledge.

Transformed Into Experience.

ProjectSeaT

Train. Decide. Experience.

From watching training to experiencing it.
